## INTRODUCTION

Tax expenditure analysis can help both policymakers and the public to understand the actual size of government, the uses to which government resources are put, and the tax and economic policy consequences that follow from the implicit or explicit choices made in fashioning legislation. This report<sup>1</sup> on tax expenditures for fiscal years 2014-2018 is prepared by the staff of the Joint Committee on Taxation (“Joint Committee staff”) for the House Committee on Ways and Means and the Senate Committee on Finance. The report also is submitted to the House and Senate Committees on the Budget.

As in the case of earlier reports,<sup>2</sup> the estimates of tax expenditures in this report were prepared in consultation with the staff of the Office of Tax Analysis in the Department of the Treasury (“the Treasury”). The Treasury published its estimates of tax expenditures for fiscal years 2013-2019 in the Administration's budgetary statement of March 4, 2014.<sup>3</sup> The lists of tax expenditures in this Joint Committee staff report and the Administration's budgetary statement overlap considerably; the differences are discussed in Part I of this report under the heading “Comparisons with Treasury.”

The Joint Committee staff has made its estimates (as shown in Table 1) based on the provisions in Federal tax law enacted through June 30, 2014. Expired or repealed provisions are not listed unless they have continuing revenue effects that are associated with ongoing taxpayer activity. Proposed extensions or modifications of expiring provisions are not included until they have been enacted into law. The tax expenditure calculations in this report are based on the January 2014 Congressional Budget Office (“CBO”) revenue baseline and Joint Committee staff projections of the gross income, deductions, and expenditures of individuals and corporations for calendar years 2013-2018.

Part I of this report contains a discussion of the concept of tax expenditures; Part II is a discussion of the measurement of tax expenditures; and Part III contains various estimates. Estimates of tax expenditures for fiscal years 2014-2018 are presented in Table 1 in Part III. Table 2 shows the distribution of tax returns by income class, and Table 3 presents distributions of selected individual tax expenditures by income class.

## I. THE CONCEPT OF TAX EXPENDITURES

### Overview

Tax expenditures are defined under the Congressional Budget and Impoundment Control Act of 1974 (the “Budget Act”) as “revenue losses attributable to provisions of the Federal tax laws which allow a special exclusion, exemption, or deduction from gross income or which provide a special credit, a preferential rate of tax, or a deferral of tax liability.”<sup>4</sup> Thus, tax expenditures include any reductions in income tax liabilities that result from special tax provisions or regulations that provide tax benefits to particular taxpayers.

Special income tax provisions are referred to as tax expenditures because they may be analogous to direct outlay programs and may be considered alternative means of accomplishing similar budget policy objectives. Tax expenditures are similar to direct spending programs that function as entitlements to those who meet the established statutory criteria.

Estimates of tax expenditures are prepared for use in budget analysis. They are a measure of the economic benefits that are provided through the tax laws to various groups of taxpayers and sectors of the economy. The estimates also may be useful in determining the relative merits of achieving specific public goals through tax benefits or direct outlays. It is appropriate to evaluate tax expenditures with respect to cost, distributional consequences, alternative means of provision, and economic effects and to allow policymakers to evaluate the tradeoffs among these and other potentially competing policy goals.

The legislative history of the Budget Act indicates that tax expenditures are to be defined with reference to a normal income tax structure (referred to here as “normal income tax law”). The determination of whether a provision is a tax expenditure is made on the basis of a broad concept of income that is larger in scope than “income” as defined under general U.S. income tax principles. The Joint Committee staff uses its judgment in distinguishing between those income tax provisions (and regulations) that can be viewed as a part of normal income tax law and those special provisions that result in tax expenditures. A provision traditionally has been listed as a tax expenditure by the Joint Committee staff if there is a reasonable basis for such classification and the provision results in more than a *de minimis* revenue loss, which solely for this purpose means a total revenue loss of less than \$50 million over the five fiscal years 2014-2018. The Joint Committee staff emphasizes, however, that in the process of listing tax expenditures, no judgment is made, nor any implication intended, about the desirability of any special tax provision as a matter of public policy.

---

<sup>4</sup> Congressional Budget and Impoundment Control Act of 1974 (Pub. L. No. 93-344), sec. 3(3). The Budget Act requires CBO and the Treasury to publish detailed lists of tax expenditures annually. The Joint Committee staff issued reports prior to the statutory obligation placed on the CBO and continued to do so thereafter. In light of this precedent and a subsequent statutory requirement that the CBO rely exclusively on Joint Committee staff estimates when considering the revenue effects of proposed legislation, the CBO has always relied on the Joint Committee staff for the production of its annual tax expenditure publication. See Pub. L. No. 99-177, sec. 273, codified at 2 USC 601(f).

The Budget Act uses the term tax expenditure to refer to the special tax provisions that are contained in the Federal income taxes on individuals and corporations.<sup>5</sup> Other Federal taxes such as excise taxes, employment taxes, and estate and gift taxes may also have exceptions, exclusions, and credits, but those special tax provisions are not included in this report because they are not part of the income tax.<sup>6</sup> Thus, for example, the income tax exclusion for employer-paid health insurance is included, but the Federal Insurance Contributions Act (“FICA”) tax exclusion for employer-paid health insurance is not treated as a tax expenditure in this report.

Some provisions in the Internal Revenue Code (“the Code”) provide for special tax treatment that is less favorable than normal income tax law. Examples of such provisions include (1) the denial of deductions for certain lobbying expenses, (2) the denial of deductions for certain executive compensation, and (3) the two-percent floor on itemized deductions for unreimbursed employee expenses. Tax provisions that provide treatment less favorable than normal income tax law and are not related directly to progressivity are called *negative* tax expenditures.<sup>7</sup> Special provisions of the law the principal purpose for which is to enforce general tax rules, or to prevent the violation of other laws, are not treated as negative tax expenditures even though they may increase the tax burden for certain taxpayers. Examples of these compliance and enforcement provisions include the (1) limitation on net operating loss carryforwards and certain built-in losses following ownership changes (sec. 382), (2) wash sale rules (sec. 1091), (3) denial of capital gain treatment for gains on certain obligations not in registered form (sec. 1287), and (4) disallowance of a deduction for fines and penalties (sec. 162(f)).

### **Individual Income Tax**

Under the Joint Committee staff methodology, the normal structure of the individual income tax includes the following major components: one personal exemption for each taxpayer and one for each dependent, the standard deduction, the existing tax rate schedule, and deductions for investment and employee business expenses. Most other tax benefits for individual taxpayers are classified as exceptions to normal income tax law.

---

<sup>5</sup> The Federal income tax on individuals also applies to estates and trusts, which are subject to a separate income tax rate schedule (sec. 1(e) of the Code). Estates and trusts may benefit from some of the same tax expenditure provisions that apply to individuals. In Table 1 of this report, the tax expenditures that apply to estates and trusts have been included in the estimates of tax expenditures for individual taxpayers.

<sup>6</sup> Other analysts have explored applying the concept of tax expenditures to payroll and excise taxes. See Jonathan Barry Forman, “Would a Social Security Tax Expenditure Budget Make Sense?” *Public Budgeting and Financial Management*, 5, 1993, pp. 311-335, Bruce F. Davie, “Tax Expenditures in the Federal Excise Tax System,” *National Tax Journal*, 47, March 1994, pp. 39-62, and Lindsay Oldenski, “Searching for Structure in the Federal Excise Tax System: An Excise Tax Expenditure Budget,” *National Tax Journal*, 57, September 2004, pp. 613-637. Prior to 2003, the President’s budget contained a section that reviewed and tabulated estate and gift tax provisions that the Treasury considered tax expenditures.

<sup>7</sup> Although the Budget Act does not require the identification of negative tax expenditures, the Joint Committee staff has presented a number of negative tax expenditures for completeness.

The Joint Committee staff views the personal exemptions and the standard deduction as defining the zero-rate bracket that is a part of normal tax law. An itemized deduction that is not necessary for the generation of income is classified as a tax expenditure, but only to the extent that it, when added to a taxpayer's other itemized deductions, exceeds the standard deduction.

All employee compensation is subject to tax unless the Code contains a specific exclusion for the income. Specific exclusions for employer-provided benefits include: coverage under accident and health plans,<sup>8</sup> accident and disability insurance, group term life insurance, educational assistance, tuition reduction benefits, transportation benefits (parking, van pools, and transit passes), dependent care assistance, adoption assistance, meals and lodging furnished for the convenience of the employer, employee awards, and other miscellaneous fringe benefits (*e.g.*, employee discounts, services provided to employees at no additional cost to employers, and *de minimis* fringe benefits). Each of these exclusions is classified as a tax expenditure in this report.

Under normal income tax law, employer contributions to pension plans and income earned on pension assets generally would be taxable to employees as the contributions are made and as the income is earned, and employees would not receive any deduction or exclusion for their pension contributions. Under present law, employer contributions to qualified pension plans and, generally, employee contributions made at the election of the employee through salary reduction are not taxed until distributed to the employee, and income earned on pension assets is not taxed until distributed. The tax expenditure for "net exclusion of pension contributions and earnings" is computed as the income taxes forgone on current tax-excluded pension contributions and earnings less the income taxes paid on current pension distributions (including the 10-percent additional tax paid on early withdrawals from pension plans).

Under present law, social security and tier 1 railroad retirement benefits are partially excluded or fully excluded from gross income.<sup>9</sup> Under normal income tax law, retirees would be entitled to exclude only the portion of the retirement benefits that represents a return of the payroll taxes that they paid during their working years. Thus, the exclusion of social security and railroad retirement benefits in excess of payroll tax payments is classified as a tax expenditure.

All Medicare benefits are excluded from taxation. The value of Medicare Part A insurance generally is greater than the Health Insurance ("HI") tax contributions that enrollees make during their working years, the value of Medicare Part B insurance generally is greater than the Part B premium that enrollees must pay, and the value of Medicare Part D (prescription drug) insurance generally is greater than the Part D premium that enrollees must pay. The

---

<sup>8</sup> Present law contains an exclusion for employer-provided coverage under accident and health plans (sec. 106) and an exclusion for benefits received by employees under employer-provided accident and health plans (sec. 105(b)). These two exclusions are viewed as a single tax expenditure. Under normal income tax law, the value of employer-provided accident and health coverage would be includable in the income of employees, but employees would not be subject to tax on the accident and health insurance benefits (reimbursements) that they might receive.

<sup>9</sup> For taxpayers with modified adjusted gross incomes above certain levels, up to 85 percent of social security and tier 1 railroad retirement benefits are includable in income.

exclusion of the value of Medicare Part A insurance in excess of HI tax contributions is classified as a tax expenditure, as are the exclusion of the value of Medicare Part B insurance in excess of Part B premiums and the exclusion of the value of Part D insurance in excess of Part D premiums.

Public assistance benefits are excluded from gross income by statute or by Treasury regulations. Table 1 contains tax expenditure calculations for workers' compensation benefits, special benefits for disabled coal miners, and cash public assistance benefits (which include Supplemental Security Income benefits and Temporary Assistance for Needy Families benefits).

The individual income tax does not include in gross income the imputed income that individuals receive from the services provided by owner-occupied homes and durable goods.<sup>10</sup> However, the Joint Committee staff does not classify this exclusion as a tax expenditure.<sup>11</sup> The measurement of imputed income for tax purposes presents administrative problems and its exclusion from taxable income may be regarded as an administrative necessity.<sup>12</sup> Under normal income tax law, individuals are allowed to deduct only the interest on indebtedness incurred in connection with a trade or business or an investment. Thus, the deduction for mortgage interest on a principal or second residence is classified as a tax expenditure.

The Joint Committee staff assumes that, for administrative feasibility, normal income tax law would tax capital gains in full in the year the gains are realized through sale, exchange, gift, or transfer at death. Thus, the deferral of tax until realization is not classified as a tax expenditure. However, reduced rates of tax, further deferrals of tax (beyond the year of sale, exchange, gift, or transfer at death), and exclusions of certain capital gains are classified as tax expenditures. Because of the same concern for administrative feasibility, it also is assumed that normal income tax law does not provide for any indexing of the basis of capital assets for changes in the general price level. Thus, under normal income tax law (as under present law), the income tax is levied on nominal gains as opposed to real gains in asset values.

There are many types of State and local government bonds and qualified private activity bonds the interest on which is exempt from Federal income taxation or for which a tax credit is available. Table 1 contains a separate tax expenditure listing for each type of bond.

---

<sup>10</sup> The National Income and Product Accounts include estimates of this imputed income. The accounts appear in *Survey of Current Business*, published monthly by the U.S. Department of Commerce, Bureau of Economic Analysis. However, a taxpayer-by-taxpayer accounting of imputed income would be necessary for a tax expenditure estimate.

<sup>11</sup> The Treasury Department provides a tax expenditure calculation for the exclusion of net rental income of homeowners that combines the positive tax expenditure for the failure to impute rental income with the negative tax expenditure for the failure to allow a deduction for depreciation and other costs.

<sup>12</sup> If the imputed income from owner-occupied homes were included in adjusted gross income, it would be proper to include all mortgage interest deductions and related property tax deductions as part of the normal income tax structure, since interest and property tax deductions would be allowable as a cost of producing imputed income. It also would be appropriate to allow deductions for depreciation and maintenance expenses for owner-occupied homes.

Under the Joint Committee staff view of normal tax law, compensatory stock options are subject to regular income tax at the time the options are exercised and employers receive a corresponding tax deduction.<sup>13</sup> The employee's income is equal to the difference between the purchase price of the stock and the market price on the day the option is exercised. Present law provides for special tax treatment for incentive stock options and options acquired under employee stock purchase plans. When certain requirements are satisfied, then: (1) the income that is received at the time the option is exercised is excluded for purposes of the regular income tax but, in the case of an incentive stock option, included for purposes of the alternative minimum tax ("AMT"); (2) the gain from any subsequent sale of the stock is taxed as a capital gain; and (3) the employer does not receive a tax deduction with respect to the option. The special tax treatment provided to the employee is viewed as a tax expenditure by the Joint Committee staff, and an estimate of this tax expenditure is contained in Table 1. However, it should be noted that the revenue loss from the special tax treatment provided to the employee is accompanied by a significant revenue gain from the denial of the deduction to the employer. The negative tax expenditure created by the denial of the deduction for employers is incorporated in the calculation of the tax expenditure.

The individual AMT and the passive activity loss rules are not viewed by the Joint Committee staff as a part of normal income tax law. Instead, they are viewed as provisions that reduce the magnitude of the tax expenditures to which they apply. For example, the AMT reduces the value of the deduction for State and local income taxes (for those taxpayers subject to the AMT) by not allowing the deductions to be claimed in the calculation of AMT liability. Similarly, the passive loss rules defer otherwise allowable deductions and credits from passive activities until a time when the taxpayer has passive income or disposes of the assets associated with the passive activity. Exceptions to the individual AMT and the passive loss rules are not classified as tax expenditures by the Joint Committee staff because the effects of the exceptions already are incorporated in the estimates of related tax expenditures. In two cases the restrictive effects of the AMT are presented separately because there are no underlying positive tax expenditures reflecting these effects: the negative tax expenditures for the AMT's disallowance of personal exemptions and the standard deduction; and the net AMT attributable to the net operating loss limitation.

### **Business Income Taxation**

Regardless of the legal form of organization (sole proprietorship, partnership, or S or C corporation), the same general principles are used in the computation of taxable business income. Thus, most business tax expenditures apply equally to unincorporated and incorporated businesses.

One of the most difficult issues in defining tax expenditures for business income relates to the tax treatment of capital costs. Under present law, capital costs may be recovered under a variety of alternative methods, depending upon the nature of the costs and the status of the taxpayer. For example, investments in equipment and structures may qualify for tax credits,

---

<sup>13</sup> If the option has a readily ascertainable fair market value, normal law taxes the option at the time it is granted and the employer is entitled to a deduction at that time.

expensing, accelerated depreciation, or straight-line depreciation. The Joint Committee staff generally classifies as tax expenditures cost recovery allowances that are more favorable than those provided under the alternative depreciation system (sec. 168(g)), which provides for straight-line recovery over tax lives that are longer than those permitted under the accelerated system.

Some economists assert that this may not represent the difference between tax depreciation and economic depreciation. In particular, some economists have found that economic depreciation follows a geometric pattern, as opposed to a straight-line pattern, because data suggest that a geometric pattern more closely matches the actual pattern of price declines for most asset types. The Bureau of Economic Analysis (“BEA”) of the Department of Commerce introduced a new methodology for calculating economic depreciation for purposes of the National Income and Product Accounts (“NIPA”) in 1997 that relies on constant (geometric) rates of depreciation rather than the straight-line method used previously and embodied in the alternative depreciation system. This analysis is based on separate lives and depreciation rates for each of dozens of types of assets, unlike the tax depreciation rules.<sup>14</sup> A somewhat similar result could be reproduced mathematically using the straight-line method and adjusting the recovery period. The straight-line method could be used over a shorter or longer recovery period to provide for a present value of tax depreciation greater than, equal to, or less than the present value of economic depreciation.<sup>15</sup>

The Joint Committee staff estimates another tax expenditure for depreciation in those specific cases where the tax treatment of a certain type of asset deviates from the overall treatment of other similar types of assets. In Table 1, these items are reflected in the various tax expenditure estimates for depreciation. As indicated above, the Joint Committee staff assumes that normal income tax law does not provide for any indexing of the basis of capital assets (nor, for that matter, any indexing with respect to expenses associated with these assets). Thus, normal income tax law does not take into account the effects of inflation on tax depreciation.

The Joint Committee staff uses several accounting standards in evaluating the provisions in the Code that govern the recognition of business receipts and expenses. Under the Joint Committee staff view, normal income tax law is assumed to require the accrual method of accounting (except where its application is deemed infeasible), the standard of “economic performance” (used in the Code to test whether liabilities are deductible), and the general concept of matching income and expenses. In general, tax provisions that do not satisfy all three standards are viewed as tax expenditures. For example, the deduction for contributions to taxpayer-controlled mining reclamation reserve accounts is viewed as a tax expenditure because the contributions do not satisfy the economic performance standard. (Adherence to the standard

---

<sup>14</sup> For a detailed discussion of the BEA methodology, see Barbara M. Fraumeni, “The Measurement of Depreciation in the U.S. National Income and Product Accounts,” *Survey of Current Business*, 77, July 1997, pp. 7–23.

<sup>15</sup> Tax expenditures are calculated on a cash flow basis such that two methods of depreciation with equivalent present value may produce both positive and negative tax expenditure estimates on a year by year basis relative to economic depreciation.

would require that the taxpayer make an irrevocable contribution toward future reclamation, involving a trust fund or similar mechanism, as occurs in a number of areas in the Code.) In contrast, the deductions for contributions to nuclear decommissioning trust accounts and certain environmental settlement trust accounts are not viewed as tax expenditures because the contributions are irrevocable (*i.e.*, they satisfy the economic performance standard). However, present law provides for an accelerated deduction for payments made to a nuclear decommissioning fund made within 2 ½ months after the close of the taxable year and a reduced rate of tax on the incomes of these two types of trust accounts. This acceleration and these tax rate reductions are viewed as tax expenditures.

The Joint Committee staff assumes that normal income tax law would provide for the carryback and carryforward of net operating losses. The staff also assumes that the general limits on the number of years that such losses may be carried back or forward were chosen for reasons of administrative convenience and compliance concerns and may be assumed to represent normal income tax law. Exceptions to the general limits on carrybacks and carryforwards are viewed as tax expenditures.

### **Corporate Income Tax**

The income of corporations (other than S corporations) generally is subject to the corporate income tax. The corporate income tax includes a graduated tax rate schedule. The lower tax rates in the schedule are classified by the Joint Committee staff as a tax expenditure (as opposed to normal income tax law) because they are intended to provide tax benefits to small business and, unlike the graduated individual income tax rates, are unrelated directly to concerns about the ability of individuals to pay taxes.

Exceptions to the corporate AMT are not viewed as tax expenditures because the effects of the AMT exceptions are already incorporated in the estimates of related tax expenditures.<sup>16</sup>

Certain income of pass-through entities is exempt from the corporate income tax. The income of sole proprietorships, S corporations, most partnerships, and other entities (such as regulated investment companies, real estate investment trusts, real estate mortgage investment conduits, and cooperatives) is taxed only at the individual level. The special tax rules for these pass-through entities are not classified as tax expenditures because the tax benefits are available to any entity that chooses to organize itself and operate in the required manner.<sup>17</sup>

---

<sup>16</sup> See discussion of the individual AMT above.

<sup>17</sup> Special rules for certain types of entities may interact with other provisions in a manner that could be viewed as creating or enhancing a tax expenditure. However, the classification of such interactions is ambiguous, and they generally are not listed as tax expenditures. As one example, a C corporation must recognize corporate level gain when its assets are distributed to shareholders or are sold. To the extent that built-in gain in the assets of a C corporation may escape corporate level tax following the entity's conversion to S corporation status, it could be argued that the interaction of the different entity rules creates a tax expenditure by relieving the corporate tax on built-in C corporation gain. At the same time, recognized gain is subject to immediate shareholder tax in S corporation form, which some might argue is a negative tax expenditure compared to continuation as a C corporation that defers shareholder level tax until distributions are made to shareholders. On the other hand, if a C

Nonprofit corporations that satisfy the requirements of section 501 also generally are exempt from corporate income tax. The tax exemption for noncharitable organizations that have a direct business analogue or compete with for-profit organizations organized for similar purposes is a tax expenditure.<sup>18</sup> The tax exemption for certain nonprofit cooperative business organizations, such as trade associations, is not treated as a tax expenditure just as the entity-level exemption given to for-profit pass-through business entities is not treated as a tax expenditure. With respect to other nonprofit organizations, such as charities, tax-exempt status is not classified as a tax expenditure because the nonbusiness activities of such organizations generally must predominate and their unrelated business activities are subject to tax.<sup>19</sup> However, there are numerous exceptions that allow for otherwise unrelated business income to escape taxation,<sup>20</sup> and these exceptions are treated as tax expenditures. In general, the imputed income derived from nonbusiness activities conducted by individuals or collectively by certain nonprofit organizations is outside the normal income tax base. However, the ability of donors to such nonprofit organizations to claim a charitable contribution deduction is a tax expenditure, as is the exclusion of income granted to holders of tax-exempt financing issued by charities.

### **Recent Legislation**

There has been no recent legislation that creates, modifies, or terminates any income tax expenditures since the last publication of this report.

### **Expiring Tax Expenditure Provisions**

A number of tax expenditure provisions expired in 2013 or are scheduled to expire in 2014. Some provisions expired prior to 2013, but have continuing revenue effects that are associated with ongoing taxpayer activity. These determinations reflect present law as of June 30, 2014.

- The credit for certain nonbusiness energy property expires for expenditures made after December 31, 2013.

---

corporation converts to a partnership, rather than an S corporation, both corporate and shareholder level tax on the built-in gain is imposed immediately. It is unclear whether normal income tax law requires immediate or deferred recognition of gain at both the corporate and shareholder level, only the corporate level, or only the shareholder level. This is an example of how identification of tax expenditures requires an articulation of normal income tax law that is not necessarily automatic and obvious.

<sup>18</sup> These organizations include small insurance companies, mutual or cooperative electric companies, State credit unions, and Federal credit unions.

<sup>19</sup> The tax exemption for charities is not treated as a tax expenditure even if taxable analogues may exist. For example, the tax exemption for hospitals and universities is not treated as a tax expenditure notwithstanding the existence of taxable hospitals and universities.

<sup>20</sup> These exceptions include certain passive income that arguably may relate to business activities, such as royalties or rents received from licensing trade names or other assets typically used in a trade or business, as well as other passive income such as certain dividends and interest. Other exceptions include income derived from certain research activities and income from certain trade show and fair activities.

- The credit for alternative fuel vehicle refueling property other than property relating to hydrogen expires for property placed in service after December 31, 2013.
- The credit for two- or three-wheeled plug-in electric vehicles expires for vehicles acquired after December 31, 2013.
- The credit for health insurance costs of eligible individuals expires for months beginning after December 31, 2013.
- The second generation biofuel producer credit (formerly the cellulosic biofuel producer credit) expires for qualified second generation biofuel production after December 31, 2013.
- The credit for biodiesel and renewable diesel fuel expires for fuel sold or used after December 31, 2013.
- The credit for research and experimentation expenses expires for amounts paid or incurred after December 31, 2013.
- The determination of low-income housing credit rate allocations with respect to nonfederally subsidized buildings expires with respect to housing credit dollar amount allocations made after December 31, 2013.
- The credit for electricity produced from certain renewable resources expires for facilities the construction of which begins after December 31, 2013.
- The election to claim an energy credit in lieu of the credit for electricity produced from certain renewable resources expires for facilities the construction of which begins after December 31, 2013.
- The credit for electricity produced from certain renewable resources expires for Indian coal produced and sold after December 31, 2013.
- The Indian employment tax credit expires for taxable years beginning after December 31, 2013.
- The new markets tax credit expires December 31, 2013.
- The credit for certain expenditures on railroad track maintenance expires for expenditures paid or incurred after December 31, 2013.
- The credit for construction of new energy-efficient homes expires for homes purchased after December 31, 2013.
- The credit for energy efficient appliances expires for certain dishwashers, clothes washers, and refrigerators produced after December 31, 2013.
- The credit for training costs of mine rescue team employees expires for taxable years beginning after December 31, 2013. This tax expenditure is not listed in Table 1 because the estimated revenue loss is below the *de minimis* amount.
- The credit for wages of employees who are active duty members of the uniformed services expires for payments made after December 31, 2013. This tax expenditure is not listed in Table 1 because the estimated revenue loss is below the *de minimis* amount.
- The work opportunity tax credit expires for wages paid or incurred for individuals who begin work for an employer after December 31, 2013.
- The allocation of new bond authority for the credit to holders of qualified zone academy bonds expires for bonds issued after December 31, 2013.
- The above-the-line deduction for teacher classroom expenses expires for taxable years beginning after December 31, 2013.

- The exclusion from gross income of discharge of qualified principal residence indebtedness expires for discharges of indebtedness occurring after December 31, 2013.
- The increase in the exclusion of employer-provided transit and vanpool benefits to the same dollar amount in effect for qualified parking expires for taxable years beginning after December 31, 2013.
- The treatment of military basic housing allowances for purposes of determining income of occupants of residential rental projects under the low-income housing credit and exempt facility bond requirements expires for income determinations made after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimates for “Credit for low-income housing” and “Exclusion of interest on State and local government qualified private activity bonds for rental housing.”
- The deduction for premiums for qualified mortgage insurance as interest that is qualified residence interest expires for amounts paid, accrued, or properly allocable to any period after December 31, 2013.
- The election to deduct State and local general sales taxes (in lieu of State and local income taxes) expires for taxable years beginning after December 31, 2013.
- Three-year cost recovery for race horses two years old or younger expires for race horses placed in service after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Depreciation of equipment in excess of the alternative depreciation system.”
- Fifteen-year straight-line cost recovery for qualified leasehold improvements, qualified restaurant property, and qualified retail improvements expires for property placed in service after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Depreciation of buildings other than rental housing in excess of alternative depreciation system.”
- Seven-year cost recovery for certain motorsports racetrack property expires for property placed in service after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Depreciation of buildings other than rental housing in excess of alternative depreciation system.”
- Accelerated depreciation for business property on Indian reservations expires for property placed in service after December 31, 2013. In Table 1, this is reflected in the various tax expenditure estimates for depreciation.
- Additional first-year depreciation for 50 percent of basis of qualified property expires for property acquired after December 31, 2013.<sup>21</sup>
- The special allowance for 50 percent of basis of second generation biofuel plant property (formerly cellulosic biofuel plant property) expires for property placed in service after December 31, 2013. This tax expenditure is not listed in Table 1 because the estimated revenue loss is below the *de minimis* amount.
- The higher deduction limits for charitable contributions of real property interests made exclusively for conservation purposes expires for contributions made in taxable years beginning after December 31, 2013. In Table 1, this is reflected in the tax

---

<sup>21</sup> The 50-percent additional first year depreciation deduction expires December 31, 2014, for certain longer-lived and transportation property.

- expenditure estimate for “Deduction for charitable contributions, other than for education and health.”
- The enhanced charitable deduction for contributions of food inventory expires for contributions made after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Deduction for charitable contributions, other than for education and health.”
  - The increased dollar limitations, \$500,000 and \$2 million, for expensing certain depreciable business assets under section 179 expire for taxable years beginning after December 31, 2013. In Table 1, these changes are reflected in the tax expenditure estimate for “Expensing under section 179 of depreciable business property.”
  - The election to expense 50 percent of the cost of any qualified refinery property expires for property placed in service after December 31, 2013.
  - The deduction for expenditures on energy-efficient commercial building property expires for property placed in service after December 31, 2013.
  - The election to expense advanced mine safety equipment expires for property placed in service after December 31, 2013. This tax expenditure is not listed in Table 1 because the estimated revenue loss is below the *de minimis* amount.
  - The election to expense qualified film and television productions expires for productions commencing after December 31, 2013.
  - The deduction for income attributable to domestic production activities in Puerto Rico expires for taxable years beginning after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Deduction for income attributable to domestic production activities.”
  - The above-the-line deduction for qualified tuition and related expenses expires for taxable years beginning after December 31, 2013.
  - The exclusion of individual retirement plan distributions for charitable purposes expires for taxable years beginning after December 31, 2013. In Table 1, this is reflected in the tax expenditure estimate for “Traditional IRAs.”
  - The deferral of gain from the disposition of electric transmission property to implement Federal Energy Regulation Commission restructuring policy expires for dispositions after December 31, 2013.
  - The exemptions under subpart F for active financing income expire for taxable years beginning after December 31, 2013.
  - The look-through treatment of payments between related controlled foreign corporations under the foreign personal holding company rules expires for taxable years beginning after December 31, 2013.
  - The 100-percent exclusion for gain from certain small business stock expires for stock acquired after December 31, 2013.
  - The designations and tax incentives for empowerment zones expire after December 31, 2013.
  - The credit for corporate income earned in American Samoa expires for taxable years beginning after December 31, 2013. This tax expenditure is not listed in Table 1 because the estimated revenue loss is below the *de minimis* amount.
  - The alternative motor vehicle credit for qualified fuel cell motor vehicles expires for property purchased after December 31, 2014.

- The credit for alternative fuel vehicle refueling property relating to hydrogen expires for property placed in service after December 31, 2014
- The automatic amortization extension for multiemployer defined benefit pension plans expires for applications submitted after December 31, 2014.
- The additional funding rules for multiemployer defined benefit pension plans entering endangered or critical status expire for plan years beginning after December 31, 2014.
- The deemed approval of adoption, use, or cessation of the use of the shortfall funding method for multiemployer defined benefit pension plans expires for plan years beginning after December 31, 2014.

### **Comparisons with Treasury**

The Joint Committee staff and Treasury lists of tax expenditures differ in at least six respects. First, the Joint Committee staff and the Treasury use differing methodologies for the estimation of tax expenditures. Thus, the estimates in Table 1 are not necessarily comparable with the estimates prepared by the Treasury. Under the Joint Committee staff methodology, each tax expenditure is measured by the difference between tax liability under present law and the tax liability that would result if the tax expenditure provision were repealed and taxpayers were allowed to take advantage of any of the remaining tax expenditure provisions that apply to the income or the expenses associated with the repealed tax expenditure.

For example, the tax expenditure provision for the exclusion of employer-paid health insurance is measured by the difference between tax liability under present law and the tax liability that would result if the exclusion were repealed and taxpayers were allowed to claim the next best tax treatment for the previously excluded employer-paid health insurance. This next best tax treatment could be the inclusion of the employer-paid health insurance as an itemized medical deduction on Schedule A.<sup>22</sup>

Under the Treasury methodology, each tax expenditure is measured by the difference between tax liability under present law and the tax liability that would result if the tax expenditure provision were repealed and taxpayers were prohibited from taking advantage of any of the remaining tax expenditure provisions that apply to the income or the expenses associated with the repealed tax expenditure. For example, the tax expenditure provision for the exclusion for employer-paid health insurance is measured by the difference between tax liability under present law and the tax liability that would result if the exclusion were repealed and taxpayers were required to include all of the employer-paid health insurance in income, with no offsetting deductions (*i.e.*, no deductibility on Schedule A).

Second, the Treasury uses a different classification of those provisions that can be considered a part of normal income tax law under both the individual and business income taxes. In general, the Joint Committee staff methodology involves a broader definition of the normal

---

<sup>22</sup> If the exclusion were repealed, the value of the employer-paid health insurance would be included in income and taxpayers would be treated as having purchased the insurance themselves. Thus, the insurance expense would be deductible as an itemized medical expense on Schedule A, subject to the itemized medical deduction floor (10 percent (7.5 percent for taxable years ending before January 1, 2017, if the taxpayer or the taxpayer's spouse has attained age 65) of the taxpayer's adjusted gross income).

income tax base. Thus, the Joint Committee list of tax expenditures includes some provisions that are not contained in the Treasury list. The cash method of accounting by certain businesses provides an example. The Treasury considers the cash accounting option for certain businesses to be a part of normal income tax law, but the Joint Committee staff methodology treats it as a departure from normal income tax law that constitutes a tax expenditure.

Third, the Joint Committee staff and the Treasury estimates of tax expenditures may also differ as a result of differing data sources and differences in baseline projections of incomes and expenses. The Treasury's tax expenditure calculations are based on the Administration's economic forecast. The Joint Committee staff calculations are based on the economic forecast prepared by the CBO.

Fourth, the Joint Committee staff and the Treasury estimates of tax expenditures span slightly different sets of years. The Treasury's estimates cover a seven-year period: the last fiscal year, the current fiscal year when the President's budget is submitted, and the next five fiscal years, *i.e.*, fiscal years 2013-2019. The Joint Committee staff estimates cover the current fiscal year, and the succeeding four fiscal years, *i.e.*, fiscal years 2014-2018.

Fifth, the Joint Committee staff list excludes those provisions that are estimated to result in revenue losses below the *de minimis* amount, *i.e.* less than \$50 million over the five fiscal years 2014 through 2018. The Treasury rounds all yearly estimates to the nearest \$10 million and excludes those provisions with estimates that round to zero in each year, *i.e.*, provisions that result in less than \$5 million in revenue loss in each of the years 2013 through 2019.

Finally, the Joint Committee staff list formally integrates negative tax expenditures into its standard presentation.

In some cases, two or more of the tax expenditure items in the Treasury list have been combined into a single item in the Joint Committee staff list, and vice versa. The Table 1 descriptions of some tax expenditures also may vary from the descriptions used by the Treasury.

There are some tax expenditure provisions that are contained in the Treasury list but are not contained in the Joint Committee staff list. Two of these provisions involve exceptions to the passive loss rules: the exception for working interests in oil and gas properties, and the exception for up to \$25,000 of rental losses. The Joint Committee staff does not classify these two provisions as tax expenditures; the effects of the passive loss rules (and exceptions to the rules) are included in the estimates of the tax expenditure provisions that are affected by the rules.<sup>23</sup>

---

<sup>23</sup> See discussion of the passive loss rules above.

## II. MEASUREMENT OF TAX EXPENDITURES

### Tax Expenditure Calculations Generally

A tax expenditure is measured by the difference between tax liability under present law and the tax liability that would result from a recomputation of tax without benefit of the tax expenditure provision.<sup>24</sup> Taxpayer behavior is assumed to remain unchanged for tax expenditure estimate purposes.<sup>25</sup> This assumption is made to simplify the calculation and conform to the presentation of government outlays. This approach to tax expenditure measurement is in contrast to the approach taken in revenue estimating; all Joint Committee staff revenue estimates reflect anticipated taxpayer behavior.

The tax expenditure calculations in this report are based on the January 2014 CBO revenue baseline and Joint Committee staff projections of the gross income, deductions, and expenditures of individuals and corporations for calendar years 2013-2018. These projections are used to compute tax liabilities for the present-law revenue baseline and tax liabilities for the alternative baseline that assumes that the tax expenditure provision does not exist.

Internal Revenue Service (“IRS”) statistics from recent tax returns are used to develop projections of the tax credits, deductions, and exclusions that will be claimed (or that will be denied in the case of negative tax expenditures) under the present-law baseline. These IRS statistics show the actual usage of the various tax expenditure provisions. In the case of some tax expenditures, such as the earned income credit, there is evidence that some taxpayers are not claiming all of the benefits to which they are entitled, while others are filing claims that exceed their entitlements. The tax expenditure calculations in this report are based on projections of actual claims under the various tax provisions, not the potential tax benefits to which taxpayers are entitled.

Some tax expenditure calculations are based partly on statistics for income, deductions, and expenses for prior years. Accelerated depreciation is an example. Estimates for this tax expenditure are based on the difference between tax depreciation deductions under present law and the deductions that would have been claimed in the current year if investments in the current

---

<sup>24</sup> An alternative way to measure tax expenditures is to express their values in terms of “outlay equivalents.” An outlay equivalent is the dollar size of a direct spending program that would provide taxpayers with net benefits that would equal what they now receive from a tax expenditure. For positive tax expenditures, the major difference between outlay equivalents and the tax expenditure calculations presented here is accounting for whether a tax expenditure converted into an outlay payment would itself be taxable, so that a gross-up might be needed to deliver the equivalent after-tax benefits.

<sup>25</sup> An exception to this absence of behavior in tax expenditure calculations is that a taxpayer is assumed to make simple additions or deletions in filing tax forms, what the Joint Committee staff refers to as “tax form behavior.” For example, as noted above, if the exclusion for employer-paid health insurance were repealed, taxpayers would be allowed to claim the next best tax treatment for the previously excluded insurance. This next best tax treatment could be the inclusion of the employer-paid health insurance as an itemized medical deduction on Schedule A. Similarly, a taxpayer that is eligible for one of two alternative credits is assumed to file for the second credit if the first credit is eliminated.

year and all prior years had been depreciated using the alternative (normal income tax law) depreciation system.

Each tax expenditure is calculated separately, under the assumption that all other tax expenditures remain in the Code. If two or more tax expenditures were estimated simultaneously, the total change in tax liability could be smaller or larger than the sum of the amounts shown for each item separately, as a result of interactions among the tax expenditure provisions.<sup>26</sup>

Year-to-year differences in the calculations for each tax expenditure reflect changes in tax law, including phaseouts of tax expenditure provisions and changes that alter the definition of the normal income tax structure, such as the tax rate schedule, the personal exemption amount, and the standard deduction. For example, the dollar level of tax expenditures tends to increase and decrease as tax rates increase and decrease, respectively, without any other changes in law. Some of the calculations for this tax expenditure report may differ from estimates made in previous years because of changes in law and economic conditions, the availability of better data, and improved measurement techniques.

If a tax expenditure provision were eliminated, Congress might choose to continue financial assistance through other means rather than terminate all Federal assistance for the activity. If a replacement spending program were enacted, the higher revenues received as a result of the elimination of a tax expenditure might not represent a net budget gain. A replacement program could involve direct expenditures, direct loans or loan guarantees, regulatory activity, a mandate, a different form of tax expenditure, or a general reduction in tax rates. Joint Committee staff estimates of tax expenditures do not anticipate such policy responses.

### **Tax Expenditures versus Revenue Estimates**

A tax expenditure calculation is not the same as a revenue estimate for the repeal of the tax expenditure provision for three reasons. First, unlike revenue estimates, tax expenditure calculations do not incorporate the effects of the behavioral changes that are anticipated to occur in response to the repeal of a tax expenditure provision. Second, tax expenditure calculations are concerned with changes in the reported tax liabilities of taxpayers.<sup>27</sup> Because tax expenditure analysis focuses on tax liabilities as opposed to Federal government tax receipts, there is no concern for the short-term timing of tax payments. Revenue estimates are concerned with changes in Federal tax receipts that are affected by the timing of all tax payments. Third, some of the tax provisions that provide an exclusion from income also apply to the FICA tax base, and the repeal of the income tax provision would automatically increase FICA tax revenues as well as income tax revenues. This FICA effect would be reflected in revenue estimates, but is not

---

<sup>26</sup> See Leonard E. Burman, Christopher Geissler, and Eric J. Toder, "How Big Are Total Individual Income Tax Expenditures, and Who Benefits from Them?" *American Economic Review*, 98, May 2008, pp. 79-83.

<sup>27</sup> Reported tax liabilities may reflect compliance issues, and thus calculations of tax expenditures reflect existing compliance issues.

considered in tax expenditure calculations. There may also be interactions between income tax provisions and other Federal taxes such as excise taxes and the estate and gift tax.

If a tax expenditure provision were repealed, it is likely that the repeal would be made effective for taxable years beginning after a certain date. Because most individual taxpayers have taxable years that coincide with the calendar year, the repeal of a provision affecting the individual income tax most likely would be effective for taxable years beginning after December 31 of a certain year. However, the Federal government's fiscal year begins October 1. Thus, the revenue estimate for repeal of a provision would show a smaller revenue gain in the first fiscal year than in subsequent fiscal years. This is due to the fact that the repeal would be effective after the start of the Federal government's fiscal year. The revenue estimate might also reflect some delay in the timing of the revenue gains as a result of the taxpayer tendency to postpone or forgo changes in tax withholding and estimated tax payments, and very often repeal or modification of a tax provision includes transition relief that would not be captured in a tax expenditure calculation.

### **Quantitatively *de minimis* Tax Expenditures**

The following tax provisions are viewed as tax expenditures by the Joint Committee staff but are not listed in Table 1 because the estimated revenue losses for fiscal years 2014 through 2018 are below the *de minimis* amount (\$50 million):

#### ***International affairs***

- Miscellaneous nonresident individual income tax exclusions (certain gambling winnings (sec. 871(j)), ship or aircraft operation income, certain exchange or training programs compensation, bond income of residents of the Ryukyu Islands, certain wagering income (sec. 872(b)))
- Miscellaneous foreign corporate income tax exclusions (ship or aircraft operation income, foreign railroad rolling stock earnings, certain communication satellite earnings (sec. 883))

#### ***Energy***

- Credit for enhanced oil recovery costs (sec. 43)
- Credit for producing oil and gas from marginal wells (sec. 45I)
- Credit for production of electricity from qualifying advanced nuclear power facilities (sec. 45J)
- Credit for producing fuels from a nonconventional source (sec. 45K)
- Seven-year MACRS Alaska natural gas pipeline (sec. 168(e)(3)(C))
- 50-percent expensing of cellulosic biofuel plant property (sec. 168(l))
- Partial expensing of investments in advanced mine safety equipment (sec. 179E)
- Expensing of tertiary injectants (sec. 193)

#### ***Commerce and housing***

- Exclusion of investment income from structured settlement arrangements (secs. 72(u)(3)(C) and 130)

- Inclusion of income arising from business indebtedness discharged by the reacquisition of a debt instrument (sec. 108(i))
- Bad debt reserves of financial institutions (sec. 585)
- Alaska Native Corporation trusts (sec. 646)
- Deferral of gain on sales of property to comply with conflict-of-interest requirements (sec. 1043)
- Reduced rates of tax on gains from the sale of self-created musical works (sec. 1221(b)(3))

### ***Community and regional development***

- Issuance of tribal economic development bonds (sec. 7871(f))

### ***Education, training, employment, and social services***

- Exclusion of interest on educational savings bonds (sec. 135)
- Exclusion of restitution payments received by victims of the Nazi regime and the victims' heirs and estates (sec. 803 of Pub. L. No. 107-16)

### ***Health***

- Archer medical savings accounts (sec. 220)

### ***Income security***

- Credit for the elderly and disabled (sec. 22)
- Credit for new retirement plan expenses of small businesses (sec. 45E)

### ***Veterans' benefits and services***

- Burial expenses for veterans (38 U.S.C. 5301)

### ***General purpose fiscal assistance***

- American Samoa economic development credit (sec. 119 of Pub. L. No. 109-432)

### **Tax Expenditures for Which Quantification Is Not Available**

The following tax provisions are viewed as tax expenditures by the Joint Committee staff but are not listed in Table 1 because the projected revenue changes are unavailable (a provision that is a negative tax expenditure is indicated by an “ \* ”):

### ***International affairs***

- Branch profits tax\*
- Deduction for U.S. employment tax paid under section 3121(l) agreements for employees of foreign affiliates
- Doubling of tax rates on citizens and corporations of certain foreign countries\*

### ***Energy***

- Accelerated deductions for nuclear decommissioning costs (sec. 468A)
- Fossil fuel capital gains treatment (sec. 631(c))

### ***Natural resources and environment***

- Exception to partial interest rule for qualified conservation (sec. 170(h))

### ***Agriculture***

- Exceptions from dealer disposition definition (sec. 453(l)(2)(A))
- Exception from interest calculation on installment sales for small dispositions (sec. 453A(b)(3))
- Single purpose agricultural or horticultural structures (sec. 168(e)(3), (i)(13))

### ***Commerce and housing***

- Amortization of organizational expenditures (sec. 248)
- Deferral of prepaid subscription income (sec. 455)
- Deferral of prepaid dues income of certain membership organizations (sec. 456)
- Amortization of partnership organization and syndication fees (sec. 709)
- Unrecaptured section 1250 gain rate (section 1(h)), which applies to depreciation taken on real property
- Nonrecognition of in-kind distributions by regulated investment companies in redemption of their stock (sec. 852(b)(6))
- Special discount rate rule for certain debt instruments where stated principal amount is \$2.8 million or less (sec. 1274A)
- Deduction for investment expenses\*
- Tax treatment of convertible bonds (Treas. Reg. sec. 1.1275-4; Rev. Rul. 2002-31)
- Treatment of loans under life insurance and annuity contracts and 401(k) plans (sec. 72(e), 72(p), and 7702)
- Exemption for cemetery companies (sec. 501(c)(13))
- Certain exceptions to the UBTI rules: (secs. 512-514)
  - Passive income gains
  - Income from certain research
  - Trade shows and fairs
  - Bingo games
  - Pole rentals
  - Sponsorship payments
  - Real estate exception to the debt-financed income rules
- Specific identification of sold equities (sec. 1012 (and Treas. Reg. sec. 1012-1))
- Losses on small business stock (secs. 1242-1244)
- Nondeductibility of excise taxes imposed on employers whose employees receive premium assistance credits\* (secs. 275(a)(6) and 4980H(c)(7))
- Nondeductibility of annual fees imposed on certain drug manufacturers or importers\* (sec. 275(a)(6); sec. 9008(f)(2) of Pub. L. No. 111-148)

- Nondeductibility of annual fees imposed on health insurers\* (sec. 275(a)(6); sec. 9010(f)(2) of Pub. L. No. 111-148)

***Community and regional development***

- Three-year carryback of small businesses' and farmers' casualty losses attributable to Presidentially declared disaster (sec. 172(b)(1)(F))

***Education, training, employment, and social services***

- Allowance of 80-percent deduction for right to purchase tickets or stadium seating (sec. 170(l))

***General purpose fiscal assistance***

- Exclusion of Guam, American Samoa, and Northern Mariana Islands income (sec. 931)
- Exclusion of U.S. Virgin Islands income (sec. 932(c)(4))
- Exclusion of Puerto Rico income (sec. 933)

### **III. TAX EXPENDITURE ESTIMATES**

Tax expenditures are grouped in Table 1 in the same functional categories as outlays in the Federal budget. Estimates are shown separately for individuals and corporations. Those tax expenditures that do not fit clearly into any single budget category have been placed in the most appropriate category. Totals for each tax expenditure are presented for the five-year period covering fiscal years 2014-2018, respectively.

Several of the tax expenditure items involve small amounts of revenue, and those estimates are indicated in Table 1 by footnote 5. For each of these items, the footnote means that the tax expenditure is less than \$50 million in the fiscal year.

Table 2 presents distributional projections of tax return data for each of nine income classes including: (1) the number of all returns (including filing and nonfiling units), (2) the number of taxable returns, (3) the number of returns with itemized deductions, and (4) the amount of tax liability.

Table 3 provides distributional estimates by income class for some of the tax expenditures that affect individual taxpayers. Not all tax expenditures that affect individuals are shown in this table because of the difficulty in making reliable estimates of the income distribution of items that do not appear on tax returns under present law.

**Table 1.--Tax Expenditure Estimates By Budget Function, Fiscal Years 2014 - 2018 [1]**

Joint Committee on Taxation

NOTE: Details may not add to totals due to rounding. An "\*" indicates a negative tax expenditure for the 2014-2018 period.

[Footnotes for the Table appear on the following page]

**Footnotes for the Table:**

[1] Reflects legislation enacted by June 30, 2014.

[2] Does not include provision that permits look-through of payments between related foreign corporations.

[3] Estimate includes an outlay to State and local governments. For the purposes of this table outlays are attributed to individuals.

[4] Estimate includes refundability associated with the following

	Corporations					Individuals					Total
	2014	2015	2016	2017	2018	2014	2015	2016	2017	2018	2014-18
outlay effects:											
Credit for holders of clean renewable energy bonds.....	---	---	---	---	---	[5]	[5]	[5]	[5]	[5]	0.2
Credit for holders of qualified energy conservation bonds.....	---	---	---	---	---	[5]	[5]	[5]	[5]	[5]	0.2

Credit for children under age 17.....	---	---	---	---	---	33.1	33.7	34.3	35.3	35.2	171.6
Credit for child and dependent care and exclusion of employer-provided child care.....	---	---	---	---	---	0.9	0.9	0.9	0.9	0.9	4.5
Subsidies for insurance purchased through health benefit exchanges.....	---	---	---	---	---	13.4	30.4	64.2	80.3	86.9	275.3
Earned income credit.....	---	---	---	---	---	60.6	61.8	62.2	63.0	60.5	308.1
Build America bonds.....	---	---	---	---	---	3.2	3.2	3.2	3.2	3.2	16.0

[5] Positive tax expenditure of less than \$50 million.

[6] Estimate includes effect of credit for interest on certain home mortgages (Section 25).

[7] Includes bonus depreciation and general acceleration under MACRS.

[8] Estimate includes amounts of employer-provided health insurance purchased through cafeteria plans and employer-provided child care purchased through dependent care flexible spending accounts. These amounts are also included in other line items in this table.

[9] Estimate does not include effects of changes made by the Emergency Economic Stabilization Act of 2008.

[10] Estimate includes employer-provided child care purchased through dependent care flexible spending accounts.

[11] In addition to the general charitable deduction, the tax expenditure accounts for the higher percentage limitation for public charities, the fair market value deduction for related-use tangible personal property, the enhanced deduction for inventory, the fair market value deduction for publicly traded stock and exceptions to the partial interest rules.

[12] Estimate includes employer-provided health insurance purchased through cafeteria plans.

35

[1] Tax law as in effect on December 31, 2013, is applied to the 2014 level and sources of income and their distribution among taxpayers.

[2] The income concept used to place tax returns into classes is adjusted gross income ("AGI") plus: (a) tax-exempt interest, (b) employer contributions for health plans and life insurance, (c) employer share of FICA tax, (d) workers' compensation, (e) nontaxable Social Security benefits, (f) insurance value of Medicare benefits, (g) alternative minimum tax preference items, (h) excluded income of U.S. citizens living abroad, and (i) individuals' share of business taxes.

[3] Includes filing and non-filing units. Filing units include all taxable and nontaxable returns. Non-filing units include individuals with income that is exempt from Federal income taxation (e.g., transfer payments, interest from tax-exempt bonds, etc.). Excludes individuals who are dependents of other taxpayers and taxpayers with negative income.

[4] Individual income tax and individuals' share of business taxes.

NOTE--Details may not add to totals due to rounding.
